

Interview code

Introduction

Your first step in the Levo recruitment process is to demonstrate your understanding of writing code in Javascript (and node technologies), React, customising Bootstrap, use git and frontend best practices. You will need to complete one small test.

Once your code has been submitted, it will be reviewed by Levo.

Description

Create a repo with a *src* and *dist* folder and all the necessary code to create the ui attached.

When writing your code, please be mindful of the following:

- use eslint for js lint
- use stylelint for scss lint
- use editorconfig for editor configuration
- use package.json to expose your scripts

Code must be submitted on a public repo in github or bitbucket and a live version has to be deployed on github pages, surge.sh, vercel or netlify.

Please add the public url to the README.md file on your code base. The layout must be responsive.

You're encouraged to use bootstrap and its functional classes and React.

The following design can be altered in colours, font and font size.
